

Infinity.swiss Raises CHF 3 Million for Autonomous Accounting – How AI Startups Are Transforming Switzerland's Fiduciary Sector

MANAGEMENT SUMMARY & CORE TAKEAWAY

Zurich-based startup Infinity.swiss closed a CHF 3 million seed round on July 2, 2026—led by Founderful alongside Swiss Angels, Wingman Ventures, and prominent angels from Scandit, Planted, and Yokoy. The mission: eliminate manual bookkeeping for Swiss SMEs by 2030 through autonomous AI agents. This funding milestone demonstrates that specialized AI solutions for core administrative processes are not only technically mature but also align with the broader industry trend of deploying highly focused agents over generic platforms—especially where Swiss compliance and data minimization are paramount.

CONTEXT & EXECUTIVE RELEVANCE

On July 2, 2026, Infinity.swiss announced the close of a CHF 3 million seed round. Founderful led the investment, joined by Swiss Angels Club, Wingman Ventures, and a consortium of seasoned entrepreneurs from Scandit, Planted, and Yokoy. Founded by Nicolas Bürer—formerly Product Lead at Yokoy and an ETH Zurich graduate—the Zurich startup pursues a singular goal: by 2030, Swiss SMEs should handle their entire bookkeeping autonomously via AI agents, with no manual intervention in receipt recognition, posting, or month-end close.

The all-Swiss investor lineup is no accident. It signals a deliberate build-it-here strategy: development in the home market, data stays in Switzerland, deep integration with local ERP and banking APIs. For SMEs, this means out-of-the-box GDPR and Swiss Code of Obligations compliance, support in national languages, and native understanding of Swiss tax peculiarities.

CORE ACTION ITEMS

- 01 Receipt capture and OCR: Invoices, receipts, and bank statements are photographed or emailed; the agent extracts amount, date, VAT rate, and vendor.
- 02 Posting and validation: Based on historical entries and chart of accounts, the agent proposes the matching account and checks plausibility (e.g., unusually high amounts, missing cost center).
- 03 Payment approval workflow: When exceeding defined thresholds, the agent requests human sign-off; below the limit, it posts autonomously.
- 04 Month-end close and reporting: Accruals, provisions, and standard reports are generated on schedule and sent to fiduciaries or management.

SWISS COMPLIANCE & ARCHITECTURE GUIDELINES

- ☑ Full compliance with revised Swiss Data Protection Act (revDSG).
- ☑ Zero vendor lock-in on closed proprietary models.
- ☑ Seamless integration into Abacus, Bexio and M365 ecosystems.
